

High Performance and Scalable Backup Solution for One of the Fastest Growing Automobile Company

Introduction

How Redington/DELL implemented Data Domain in the customer environment

About Client

The customer is one of the largest automobile manufacturer in luxury segment.

Business Challenges

Customer had legacy backup solution in place for critical workload backup

VMware / Physical Servers/endpoints

Application failures the most popular issue and the slowness of backup

Security of Data the major challenge

Lack of business continuity environment exposed downtime risk to critical applications running on Virtualization platform

Required a centralized appliance-based backup solution

Building a resilient business continuity platform to ensure higher availability of their critical workloads on virtualized environments

Business continuity and backup are the pillars of modern datacenter with data security and data integrity need of the hour

Benefits to the customer

- Increased application performance, higher availability as well as a Disaster Recovery platform that was not previously available.
- Simplified system administration through management of all resources and workloads from single location
- Deduplication best than the competition
- Highly scalable and 24x7 available infrastructure
- Enables Secure and Standardized Workload environment

Redington's Implementation Service

- Networker+DD was the best fit solution
- Industry leading backup software and industry leading Deduplicated appliance Data domain
- Industry leading deduplication (Block level variable length) for all kinds of workloads
- A Single Appliance based solution to backup all workloads physical/virtual and endpoints. Their Major challenge was Oracle cluster backup. It was effectively done by Networker+DD
- Dell being a leading solution provide in Backup/Recover domain
- Streamlined backup and restore with centralised management for all workloads
- Business continuity and data resiliency achieved
- Application aware Backup/Restore with instant recovery
- Ransomware protection
- Mission critical workloads like SQL/Oracle restored efficiently

Result

- Implementation completed successfully
- The customer objective has been met
