Redington

Server Deployment for one of the Leading Stock Broking Companies

Introduction

How Redington/DELL implemented Server solution in a customer environment

About Client

Customer is one of the leading Stock Broking companies in India

Business Challenges

Customer implementation of 24 servers in stipulated time as they had a Go live for their data center project

The servers were to be implemented in the batch of 5 servers in the Mumbai location

They also had to install their proprietary software as well on the server which was windows based

All these were to be implemented in stipulated timelines

Redington's
Implementation Service

- Box opening and BOQ verification
- Server rack stacking in all locations
- Power and network cabling
- Power on
- Server status verification
- System Initialization
- IP assignment
- License installation
- System configuration
- Raid configuration
- OS installation
- Application configuration

Benefits to the customer

- All 24 servers were implemented on Time
- The project timelines were met with OS and application installation
- Helped the server/datacenter team during the go-live of the application

Conclusion

- All Broking applications running successfully on Dell Rack servers and the stipulated timelines met
