

## Redington Limited Helped A leading global healthcare company To Run Its Mission Critical Environment To Accelerate Digitization & Improve Performance

A leading global healthcare company headquartered in India.

**It has 12 manufacturing sites, seven research centres, and more than 15,000 professionals working globally.**

They recognized the need to Retain mission-critical data and technology within their own data centers and have a solution that delivers the highest levels of availability and security, which are both crucial to The business and also

- Decrease risk of security breaches and eliminate critical data loss
- Improve scalability
- Digitize more applications
- Centralized IT management

"We are excited to share our partnership with them & offer the best platform to obtain the best **on-premises cloud experience to address current and future business challenges**".

Customer's priority was to transition to a highly scalable and flexible IT infrastructure to manage the variable demands from the business and to support new projects and initiatives. To successfully transition a pay-per-use model with minimal upfront investment was deployed - We proposed an entire end-to-end solution with easy to manage applications from a single platform. With this solution,

- Their data stored on-premis
- The platform also meets compliance and regulatory requirements
- Management tool to plan the daily consumption of resources and provides complete visibility of IT spend to improve budget planning and forecasting
